Re: Final Source Control Decision
Owens Corning – Linnton Roofing and Asphalt Facility, Portland, Oregon
ECSI #1036
August 30, 2016

Dear Mr. McClincy:

The United States Environmental Protection Agency (EPA) has completed its review of the Final Source Control Decision for Owens Corning – Linnton Roofing and Asphalt Facility.

Based on the information provided, EPA agrees that Source Control Measures at this upland site are reducing the potential for recontamination of the Willamette River within the Portland Harbor Superfund Site (PHSS).

Stormwater runoff from this upland site discharges to Sediment Decision Unit (SDU) 3.9W within the Willamette River. Because SDUs may require future in-water cleanup actions at the PHSS, EPA may require further source control actions under its CERCLA authorities to ensure contaminants from this upland site do not contribute to risk or recontamination of PHSS remedies.

Please contact me at (206) 553-1970 or demaria.eva@epa.gov if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Eva DeMaria", is positioned below the word "Sincerely,".
